

**Transitional Care
has been shown to
improve outcomes!**

- ✓ After complex surgery
- ✓ When wound care requires special attention
- ✓ When recovering from a stroke or heart attack
- ✓ For intravenous antibiotics to treat a variety of infections
- ✓ If you require specialized therapies including physical therapy, speech therapy, or mental health services
- ✓ If you need catheter care, ostomy care, blood sugar monitoring, or mobility transfers

**Transitional care in smaller
hospitals results in faster
returns to home**

Ruby Valley Medical Center Transitional Care
